You should know

The MPS strategies are only available to clients of Rathbone Investment Management Limited (RIM).

The ongoing charges figure (OCF) is the overall total annual charge for investing in the Rathbone Multi-Asset Portfolio (RMAP) fund product. It includes fund expenses plus charges for the underlying funds. RIM may charge additional fees for the MPS which are not included in the OCF. Please refer to the MPS schedule of charges for details.

As the Manager's annual charge is taken from capital, that capital may be eroded or growth restricted to the extent of the charge and that, while there may as a result be a reduction in liability for Capital Gains Tax, there will be some increase in Income Tax liability for tax paying shareholders.

Performance notes

Performance figures, distribution yield and the OCF relate to the RMAP fund in which the strategy invests.

The performance table and graph show simulated historic performance using an annual management charge (AMC) of 0.75%, which is the charging level applied to the strategy's investment in the RMAP fund up to 31.08.2017 and the performance of the M-class unit thereafter.

Source performance data Rathbones, mid to mid, net income reinvested. Net of expenses and tax. Data using prices as at 31 May 2020.

^ From April 2018, the ongoing charges figure has been calculated according to PRIIPs regulations, which came into effect on 1 January 2018. Holdings are based on six monthly audited accounts. Changes to fund holdings within this period may result in higher or lower ongoing charges.

* (Targeting <33%)

Volatility as % of FTSE Developed Index figures are calculated using monthly data.

** Volatility, Sharpe Ratio and Maximum Drawdown given on a 3 year rolling basis. Sharpe Ratio calculated using a Risk Free Rate of 0.67% (based on 3 month LIBOR).

Volatility as % of FTSE Developed Index figures are calculated using monthly data.

** Volatility, Sharpe Ratio and Maximum Drawdown given on a 3 year rolling basis. Sharpe Ratio calculated using a Risk Free Rate of 0.67% (based on 3 month LIBOR).

CPI benchmarks are calculated on the rate of change of the index over different time periods. (e.g. if we were calculating YTD figures in January 2017, we would look at the percentage change from December 2016 to the end of January 2017). So we take CPI to the current value, and add on the benchmark percentage pro-rated over a year. If the CPI benchmark were to fall, more than the amount pro-rata, the benchmark YTD will be negative, even though inflation as reported by the media (calculated specifically as a 12M rate of change), remains positive.

Rathbone Investment Management

Rathbone Managed Portfolio Service (MPS) strategy information 31 May 2020

Equity

Invested in a combination of the Rathbone Multi-Asset Strategic Growth Portfolio and the Rathbone Multi-Asset Enhanced Growth Portfolio

Objective

The strategy invests for growth, with a target total return of 4% above the Consumer Price Index (CPI) over a minimum five years, and a target risk level of five sixths of the volatility of global equities as measured by the FTSE Developed Index.

Simulated performance and volatility

The performance data shown is a simulated illustration of historic performance using the charging level used by the Rathbone Managed Portfolio Service to 31.08.2017 and the performance of the M-class unit thereafter.

Data as at 31.05.20

No consideration has been given to the particular investment objectives, financial situations or particular needs of any recipient and you should take appropriate professional advice before acting. The price or value of investments, and the income derived from them, can go down as well as up and an investor may get back less than the amount invested. Rathbone Investment Management Limited will not, by virtue of distribution of this document, be responsible to any other person for providing the protections afforded to customers or for advising on any investment. Rathbone Brothers Plc is independently owned, is the sole shareholder in each of its subsidiary businesses and is listed on the London Stock Exchange. Rathbones is the

You should know

The MPS strategies are only available to clients of Rathbone Investment Management Limited (RIM).

The ongoing charges figure (OCF) is the overall total annual charge for investing in the Rathbone Multi-Asset Portfolio (RMAP) fund product. It includes fund expenses plus charges for the underlying funds. RIM may charge additional fees for the MPS which are not included in the OCF. Please refer to the MPS schedule of charges for details.

As the Manager's annual charge is taken from capital, that capital may be eroded or growth restricted to the extent of the charge and that, while there may as a result be a reduction in liability for Capital Gains Tax, there will be some increase in Income Tax liability for tax paying shareholders.

Performance notes

Performance figures, distribution yield and the OCF relate to the RMAP fund in which the strategy invests.

The performance table and graph show simulated historic performance using an annual management charge (AMC) of 0.75%, which is the charging level applied to the strategy's investment in the RMAP fund up to 31.08.2017 and the performance of the M-class unit thereafter.

Source performance data Rathbones, mid to mid, net income reinvested. Net of expenses and tax. Data using prices as at 31 May 2020. UK Consumer Price Inflation figures quoted with a one month lag.

^ From April 2018, the ongoing charges figure has been calculated according to PRIIPs regulations, which came into effect on 1 January 2018. Holdings are based on six monthly audited accounts. Changes to fund holdings within this period may result in higher or lower ongoing charges.

*(Targeting <83%)

Volatility as % of FTSE Developed Index figures are calculated using monthly data.

** Volatility, Sharpe Ratio and Maximum Drawdown given on a 3 year rolling basis. Sharpe Ratio calculated using a Risk Free Rate of 0.67% (based on 3 month LIBOR).

CPI benchmarks are calculated on the rate of change of the index over different time periods. (e.g. if we were calculating YTD figures in January 2017, we would look at the percentage change from December 2016 to the end of January 2017). So we take CPI to the current value, and add on the benchmark percentage pro-rated over a year. If the CPI benchmark were to fall, more than the amount pro-rata, the benchmark YTD will be negative, even though inflation as reported by the media (calculated specifically as a 12M rate of change), remains positive.

Management of Rathbone Multi-Asset Portfolio

Rathbone Unit Trust Management

David Coombs

Fund Manager, Head of Multi-Asset Investments

David joined Rathbones in April 2007. He is lead manager of the Rathbone Multi-Asset Portfolios. He has over 30 years of investment industry experience, much of it managing multi-asset portfolios.

Source and Copyright Citywire: David Coombs is A rated by Citywire for his three year risk adjusted performance using an absolute return methodology for the period 30.04.2017-30.04.2020.

Will McIntosh-Whyte

Fund Manager

Will McIntosh-Whyte is a fund manager on the Rathbone Multi-Asset Portfolio Funds, working alongside David Coombs. Will joined Rathbones in 2007 on the charities team. He has been on the Multi-Asset team since 2015 and is member of Rathbones' Fixed Income Funds Committee. Will graduated from the UMIST with a BSc Hons in Management, and is a CFA charterholder.

Fund facts

Authorised Corporate Director (Manager)	Rathbone Unit Trust Management Limited
Depository	NatWest Trustee and Depository Services
Product Type	Single-priced, Open-Ended Investment Company (OEIC), umbrella fund

Fund ratings explained

Distribution Technology (DT) – Dynamic Planner

The DT rating starts with quarterly asset class assumptions – how the asset classes are expected to behave over the long-term with respect to returns, volatility (performance 'ups' and 'downs') and correlations (how much they perform in the same way). DT has created ten asset allocations that gradually increase the expected return and risk, evenly across the risk spectrum. The portfolios target the centre of the ten risk boundaries and therefore, provide a match to a client's risk preference as assessed by DT's own attitude to risk questionnaire.

Defaqto risk profiles

Each fund will be put into one of the 10 Defaqto risk profiles, which overlap each other. This means that mapping solutions become easier since there are no cut-off boundary issues. The approach uses both opinions and numerical inputs. It uses a combination of the asset allocation (in order to get a stochastic or random variable projection) along with the historic performance of the fund (versus Defaqto's risk profiles) and also discussion with the fund manager to truly understand what the fund is aiming to achieve.

Scopic

The 'Scopic Multi-Manager Portfolio Rating' is awarded following extensive research and face-to-face manager questioning. It combines ratings awarded for the individual research topics and all ratings are opinion-based.

Capita Synaptic risk

Capita Financial Software has combined its research tool "Synaptic" with the stochastic (the probabilities of unknowable outcomes), forward-looking modelling of Moody's Analytics (formerly known as Barrie and Hibbert) risk framework. The Synaptic Risk Service table (a downloadable table of risk rated funds) and fund factsheets (the asset allocation breakdown and 'Capacity for Loss' quotient of rated funds) are updated quarterly.

Citywire rating – rating the fund manager

Fund managers move company frequently. So a fund's performance may have been generated by someone who is no longer managing it. This rating is a measure performance across all the funds run by a given manager. Less than 25% of all active fund managers achieve a Citywire rating. The manager's track record is scrutinised – a three-year performance record and analysis is based on the information ratio, a recognised measure of risk-adjusted performance.

FE Alpha Manager – rating the fund manager

The FE Alpha Manager rating is based on 3 components:

- Risk adjusted (with track record length bias) performance
- Consistent outperformance of a benchmark overall
- Out/underperformance consistency in up and down markets.
